NOTE: The final color of the concrete may not match the colors shown here due to variables beyond our control including finishing techniques, job conditions and curing methods.

COHILL'S COLOR HARDENER & RELEASE AGENTS

PRODUCT DESCRIPTION:

Cohill's Color Hardener is a fine blend of graded silica sand, cement and iron oxide pigment. It densifies the surface of the concrete while imparting color, and should be applied by the dry shake method.

Cohill's Release Agent allows for easy removal of embossing mats. For truly unique projects, a variety of Release colors that contrast with the shade of Color Hardener are recommended.

USES AND BENEFITS:

- Any concrete surface where extra durability is desired.
- The harder, denser surface resists cracks, scratches, plus grease and oil penetration.
- Bright, vibrant colors with contrasting subtle tones for a totally unique project.
